

The Single Smartest Thing To DO

New Productivity Increases

There's no such thing as a free lunch. Yet organizations have found they can double productivity, slash costs, and at the same time improve employee understanding and retention.

Training sales representatives on new offerings, bringing new workers up to speed, or ensuring employee knowledge of new compliance regulations are all examples of areas where new learning technologies can boost productivity, learning, and at the same time slash costs.

Organizations on the forefront of change have shown that new learning technologies can cut class time from 30% to 50%, reduce training related expenses by as much as 90%, and reduce new employee ramp up time by half all while increasing their understanding and retention.

"Learning technologies have been proven to offer tremendous competitive advantage by large, well funded early adopters. We are now entering an interesting time where prices for these solutions are dropping dramatically. This makes the return on investment so compelling that it may be the

single smartest move an organization can make this year," according to learning consultant veteran Rick Darby.

Rick's organization, SEDATA, has created a streamlined assessment process that rapidly zeros in on operational areas that would benefit most quickly from these new solutions. SEDATA can then help organizations plan and implement the solutions. The initial consultation is provided free of charge.

About SEDATA

SEDATA (whose meaning is Latin for "knowledge data") provides Learning and Knowledge Management consulting. Principal Consultant at SEDATA is Rick Darby, architect of the Cisco Systems eLearning Ecosystem and consultant to Fortune 1000 companies, mid tier companies, and government organizations.

SEDATA provides solutions to compliance issues, worker performance, and training needs driven by new product rollouts, new service rollouts, new system rollouts, mergers, acquisitions, cutbacks, or rapid growth.

Whether these needs are a response to competitive pressure or government regulation SEDATA's solutions typically provide more effective learning at lower cost and with faster implementation.

Call for a free initial consultation.
